for the beginning sociology student*

Sociological Analysis

AN EMPIRICAL APPROACH THROUGH REPLICATION

MURRAY A. STRAUS and JOEL I. NELSON

This unique field-tested manual provides a selection of 22 outstanding, original, and unabridged research reports together with step-by-step directions for duplicating the essentials of these reports. Thus, the student reads original research and demonstrates for himself the empirical basis for the researchers' conclusions; at the same time, he is given a feeling and appreciation for the elementary methods of sociological research. Within the grasp of the beginning student with no prior training in sociology, research methods, or statistics, the problems can each be completed within a two-hour laboratory session or as outside assignments. Most topics covered in introductory courses are included. A wide variety of methods is employed in addition to the survey questionnaire—small-groups data, content analysis, participant observation, and use of library documents. Most of the data used for these problems are obtained by questionnaires completed by students themselves. The volume contains key materials needed to make replication possible: theoretically relevant issues posed in a collection of actual reports; a questionnaire to be completed by each student; a system for ordering these observations which permits an objective and quantitative method for testing hypothesis. Tear-out report sheets. Questionnaires and ditto-masters will be supplied directly to adopting professors.
